

DRAGON S *turbo*

HORTICULTURE
LED LIGHT

The **DRAGON S turbo**, is a high output home grower or small commercial veg to flowering light. With 450 watts of power harnessed by our patented optical system, it projects more light onto and into the plant canopy than LEDs ever have before. The **S turbo** utilizes active cooling with specialized exhaust chambers that help promote transpiration while light is projected with unparalleled evenness, leaving *all* your plants happy and healthy.

SPECTRUM

The DragonS has 4 channels of LEDs: cool, natural and warm white with a red kicker including both 660nm and 720nm for the Emerson effect.

CONTROL

Connect through our proprietary wireless network to gain complete control over the spectrum. Dial in the exact recipe of light your plants need with Theia, our mobile app.

OPTICS

Our patented optics allow plants to see equal intensity light from all angles (similar to natural light), resulting in a larger growing surface with more density below the canopy. Optically focused light prevents hot or burned spots & minimizes off grid collateral light loss.

SECONDARY OPTICS

The 120 degree optic is the ideal choice for vertical and indoor applications where the lights need to be mounted at a height between 6" and 36", providing an equal distribution of light over the canopy.

The 70 degree optic was designed for greenhouses (perfect as a supplemental light source) and indoor applications where the lights need to be mounted at heights between 4' up to 14' over the canopy.
